

# Dataprise Managed Cyber: **Advanced**

Dataprise’s Managed Cyber Advanced solution offers robust protection through a suite of advanced cybersecurity solutions designed to combat evolving threats. With Endpoint Detection and Response (EDR), this solution leverages advanced machine learning and threat intelligence to prevent sophisticated attacks while continuous endpoint vulnerability scanning helps to identify critical exposures.

Beyond next-gen cyber technology, you receive an elite security team defending and protecting your organization 24x7 at a fraction of the cost of building the capability in-house. Our security professionals, analysts and hunters are always on and ready to detect and investigate any threat, any time.

## What is Managed Cyber: Advanced?

Dataprise offers two cybersecurity services packages each tailored for your level of risk tolerance and designed to enhance your existing defenses and resources.

Dataprise supports a wide range of organization of different sizes, industry vertical, and capabilities. We understand your needs are specific to your level of cybersecurity maturity, the risk profile of your business, your security roadmap, etc.

Both Advanced and Premier packages provide the real-time detection, validation, and reporting capabilities to protect an organization’s IT environment from end-to-end.

---

## Advanced

Next-gen cybersecurity technology for small to mid-size organizations with limited IT and cyber staff who want 24/7 Security Operations Center (SOC) support, threat hunting, and endpoint response.

---

## Premier

Includes all Cyber Advanced services plus additional high-value cyber maturity assessments, security log and behavioral analytics, proactive threat hunting, and more.

## Advantages of Dataprise Managed Cybersecurity

Fill the gaps to modern cybersecurity. Dataprise Managed Cybersecurity is the smartest way to save time, money, and your job. One call to us puts you on the path to the people, technology, and proven methods to swiftly recognize and respond to the oncoming rush of threats. We can enhance your existing security strategy or deliver a complete solution to attain cybersecurity maturity quickly and confidently.

### Protecting Each Layer: Human, Perimeter, Network & Endpoints

24x7x365 monitoring and detection across your environment to ensure potential risks are identified in real-time

### Elite Security Team & Enterprise-Grade Tooling

Our cybersecurity program is designed and supported by security experts who combine their knowledge with leading tools to mitigate attacks

### Scalability and Flexibility

Easily adjust to your current needs - be it new endpoints, additional services, or add-on consulting to achieve new compliance requirements

### Cost-Effective Risk Management

Benefit from our economies of scale – no need for a full-time cybersecurity team when you can leverage Dataprise’s experts

## Core Managed Cybersecurity Premier Program Components

Dataprise Managed Cybersecurity utilizes our in-house Security Operations Center (SOC) to offer continuous, around-the-clock monitoring alongside the real-time detection, validation, and reporting capabilities needed to protect an organization’s IT environment from end-to-end.

### 24x7x365 Security Monitoring, Incident Detection, Validation & Reporting

Real-time automated detection and human validation to quickly identify threats and provide actionable remediation recommendations

### Endpoint Detection and Response (EDR)

Advanced threat detection capabilities, predictive analytics, machine learning, and threat intelligence come together to detect and prevent malware, fileless attacks, and other malicious behaviors

### Continuous Endpoint & Vulnerability Scanning

Constant systems scanning for common vulnerabilities and exposures shared into a comprehensive dashboard with prioritized patching recommendations to address critical vulnerabilities promptly

### Phishing Simulations and End-User Security Awareness Training

Extensive library of phishing templates and key training topics to ensure your employees can detect and avoid potential threats

### Dark Web Credential Monitoring

Identification when your credentials have been leaked on the dark web alongside reporting and mitigation recommendations

### Executive-Level Metrics and Reporting

Automated/live reports for C-Level executives, standardized metrics and security posture assessments via dashboard

### Additional Service Features

- Endpoint Isolation
- Removeable Media Access
- Alert Investigation Handling (Automated & Remote)
- Endpoint Device Encryption
- Development Assistance for Incident Response Plan (up to 12 hours)

## We Alert & Respond Quickly

Stay in control with our proven, methodical, and evidence-based approach.

### Automated Incident Response

Our automated response to security threats enables the SOC to triage more effectively, and to respond to critical events faster.

### Malware Removal

We offer powerful protection that stops infections in their tracks.

### Incident Response Plan

We ensure that in the event of a security breach, the right personnel and procedures are in place to effectively deal with the threat.

### Remote Incident Response

Rapidly gather security-related forensics from an affected device anywhere on the planet.

### Customized Incident Response Playbook

Our incident response playbooks give your business an established workflow for specific types of incidents or threats, so you're prepared for the worst.

## We Assess, Test & Advance Your Security Posture

### Continuous Vulnerability Scanning

We eliminate the waiting period between scans by scanning your environment at the frequency you choose.

### Security Awareness Training

We equip the members of your organization with the knowledge they need to protect themselves and your organization's assets.

### Cyber Maturity Model Assessment

We evaluate your organization's security posture at a broad level and provide actionable insights to improve.

### External Penetration Testing

Designed to test the effectiveness of perimeter security controls to prevent and detect attacks as well as identifying weaknesses in internet-facing assets

### Phishing Simulations & Testing

Our simulations reduce the risks of cyber threat by ensuring your employees can detect and avoid phishing threats.

### Firewall Configuration Assessment

We assess and review your firewall on an ongoing basis so your first line of defense maintains its effectiveness.

---

## About Dataprise

Founded in 1995, Dataprise is the leading strategic IT solution provider to midmarket IT leaders who believe technology should allow you to be the best at what you do. Dataprise's unbeatable IT solutions and services are tailored to the needs of strategic CIOs and provide best-in-class managed security, network, infrastructure, collaboration, mobility, and end-user solutions. Dataprise has offices across the United States to support our clients.
