

Dataprise: Incident Response Services

Rapid Incident Response for Cyberattack Recovery & Business Continuity

When a cyberattack strikes, immediate action is critical. Dataprise Incident Response services provide organizations with specialized expertise to contain, analyze, and remediate active security incidents. Our team rapidly assesses the situation, implements containment measures, and guides organizations through the recovery process to minimize disruption and mitigate damage.

Available 24/7, our incident response team helps organizations determine the scope and impact of an attack, execute forensic investigations, and apply remediation strategies to restore operations. Dataprise Incident Response delivers targeted expertise when it's needed most, reinforcing organizations with hands-on support to accelerate recovery and strengthen future resilience.

Advantages of Dataprise Incident Response

Dataprise Incident Response is the fastest way to contain, investigate, and recover from active security incidents. One call connects you with 24/7 expert support to assess the situation, limit damage, and restore operations. Whether you need urgent response or expert guidance, our specialists bring the tools, knowledge, and proven response methodologies to help you neutralize threats and recover with confidence.

 **Rapid Containment & Threat Neutralization**
Our experts act immediately to contain active threats, limit damage, and prevent further compromise, ensuring minimal disruption to your operations

 **Adaptive & Scalable Support**
Whether you need immediate response, forensic analysis, or ongoing readiness, our services evolve with emerging threats and compliance requirements

 **Specialized Expertise & Advanced Tooling**
Our dedicated incident response specialists leverage industry-leading forensic tools and methodologies to analyze attacks, identify root causes, and guide recovery efforts

 **Cost-Effective Incident Recovery**
Eliminate the overhead of maintaining a full-time internal incident response team by leveraging Dataprise's on-demand, expert-led response services at a fraction of the cost

Dataprise Incident Response Services Offered

The Dataprise Incident Response team is available 24/7, providing organizations with immediate access to expert support when a cyber incident occurs. Below are the key services we offer to help organizations respond effectively and recover swiftly.

Incident Response Planning

Dataprise's Incident Response Planning service tailors an Incident Response (IR) plan to prepare organizations for security incidents.

Incident Response Retainer

Dataprise's Incident Response Retainer service is a prepaid arrangement granting organizations access to expert incident response support for a set number of hours as a baseline response.

Advanced Systems Decryption

Dataprise's Advanced Systems Decryption service helps organizations recover from ransomware attacks through specialized decryption tools and expertise, restoring critical data and minimizing downtime.

Incident Response & Recovery

Dataprise's Incident Response & Recovery service provides immediate support during a security incident to contain, eradicate, and recover from threats.

Digital Forensics

Dataprise's Digital Forensics service identifies the origin, methods, and impact of security breaches by collecting and analyzing digital evidence, guiding effective remediation and potential legal actions.

Recovery Equipment Rental

Dataprise's Recovery Equipment Rental service provides short-term hardware solutions during incidents, allowing organizations to maintain operations without incurring the costs of full equipment replacement.
